|                                                                                                                                                      |               |                                                                                                      | <b>Initial /NA</b>               |
| 1. Cable size, type, location, installation, and routing are in accordance with the drawings.(Check all connectors are tight)                        |               |                                                                                                      |                                  |
| 2. Bend radius is in accordance with project specifications and the cable jacket is free of kinks.                                                   |               |                                                                                                      |                                  |
| 3. Cable termination supports and support spacing is in accordance with drawings and project specifications.                                         |               |                                                                                                      |                                  |
| 4. Installation is neat and evenly spaced.(Junction boxes are cleaned out & wires are dressed within panduit)                                        |               |                                                                                                      |                                  |
| 5. Cable is free of surface damage.                                                                                                                  |               |                                                                                                      |                                  |
| 6. Correct cable tag is installed on both ends.                                                                                                      |               |                                                                                                      |                                  |
| 7. Termination kit/materials are installed in accordance with the manufacturer's instructions.                                                       |               |                                                                                                      |                                  |
| 8. Conductors are properly identified.(Core markers are the same font, size & evenly spaced / aligned)                                               |               |                                                                                                      |                                  |
| 9. Check phase location and marking (Left to Right, Top to Bottom, or Front to Rear) are in accordance with the drawings and project specifications. |               |                                                                                                      |                                  |
| 10. Insulation Test has been performed                                                                                                               |               |                                                                                                      |                                  |
| 11.
